

Individual Contributions Report: Ariton Verush

Project Title: Fuzzy Giftanator – Fuzzy Logic Gift Genie Enhancing the Art of Gifting

Course: Fuzzy Sets and Systems I

Contributions:

1. Concept Development and Research

- Collaborated on the initial concept, focusing on the importance of user engagement and personalization.
- Contributed ideas to tackle gift-giving pains, ensuring the app balances automation with human touch.

2. Technical Implementation – Front-End Development

- Developed the **front-end interface** to ensure a smooth and intuitive user experience.
- Designed interactive screens for both inputting gift preferences and guessing the gift mini game.

3. User Feedback and Survey Analysis

- Conducted surveys with other groups to collect feedback and insights on the app's usability and personalization aspects.
- Integrated user feedback into the app's logic by designing **re-suggest** features for refining gift recommendations.

4. Presentation and Documentation

- Created and presented slides highlighting the **front-end interface** and user interaction aspects.
- Documented results from **comparisons with existing platforms** and emphasized the unique value proposition of Fuzzy Giftanator.

5. Collaboration and Integration

- Worked closely with the teammate to synchronize front-end visuals with the back-end recommender system, however failed to merge both at the end.
