

Simplified Travel - User Interviews (Anonymized Public Version)

This public version preserves the design-relevant research insights while removing direct personal identifiers such as participant names and exact personal background details. It is intended for portfolio/GitHub documentation.

Participant 1

Profile summary

Young adult male participant based in Switzerland. Profession and nationality details were generalized for privacy.

How much does comfort affect your travel plans?

Comfort and budget influence the travel radius: higher budget and comfort allow broader international travel, while lower budget limits travel to nearby cities or countries.

Why do you love to travel?

The participant enjoys discovering different cultures, foods, places, and generally experiencing something new.

What do you expect from a platform that lets you make travel plans?

The participant expects strong visuals, easy access to activities around the destination, and flexible planning rather than generic pre-scripted suggestions.

Do you travel to the same place often?

The participant revisits places when they contain desired experiences or remain affordable.

What would you improve in current travel platforms?

The participant wants easier filters, simpler hotel comparison, and fewer steps/tabs needed to reach relevant options.

Do you take pre-curated packages or plan independently?

The participant prefers planning and booking independently rather than relying on travel agencies.

How early do you plan?

Trips are planned early, but final execution and decisions often happen closer to departure.

Common places or hidden/less explored places?

The participant values both popular places with user feedback and hidden gems that create a sense of discovery.

Alone or group travel?

The participant prefers group travel because shared experiences feel more adventurous and memorable.

Travel spending

The participant reported a relatively high average trip budget; the exact amount was generalized for privacy.

Country vs specific event?

The participant usually travels to experience the country itself, not only to attend a specific event.

Major travel focus

Adventure, events, and food are major motivations.

Public transportation or renting?

The participant prefers public transportation over renting a vehicle.

Participant 2

Profile summary

Young adult female participant based in Switzerland. Profession and nationality details were generalized for privacy.

Why do you love to travel?

The participant enjoys seeing new things, meeting people, and experiencing cultures.

Do you travel to the same place often?

The participant often revisits a personally meaningful familiar country/location.

How much do you carry for your trip?

The participant usually travels with one trolley bag and additional small bags.

How early do you plan?

The participant is spontaneous and does not plan far in advance.

Common places or hidden/less explored places?

The participant prefers hidden gems because they feel more natural and authentic than heavily built-up/touristic areas.

Country vs specific event?

The participant usually travels to visit the country, but sometimes travels for specific events.

Major travel focus

Food, nature, and comfort are major motivations.

What would you improve in current travel platforms?

The participant wants simplicity, fewer generic suggestions, and easier planning for multi-destination trips with specific activities.

Design implications extracted from the interviews

- The platform should support flexible trip planning instead of forcing pre-curated packages.
- Visual clarity and easy comparison are important because users rely on visuals and feedback when planning travel.
- Filters and package details should be simple, direct, and not hidden behind too many clicks.
- Group travel support, invitations, and shared decision-making are important interaction areas.
- The system should balance spontaneous planning with structured support for complex trips.
